Professional Summary

Application Development Engineer with 3+ years of experience building production web applications, dashboards, and APIs. Skilled in React, TypeScript, Python, FastAPI, and SQL, and in connecting payments and third-party systems. Experienced in retrieval-backed assistants with LangChain and vector search, and in GitHub Actions, Docker, and Kubernetes release paths.

Skills

Application: Python, JavaScript, TypeScript, React.js, FastAPI, PHP, SQL, MySQL, PostgreSQL

Frontend: React.js, TypeScript, Hooks, Context, Tailwind CSS, Vite, D3.js, HTML5, CSS3, AJAX

Backend: FastAPI, Fastify, Node.js, Express.js, PHP, REST APIs, authentication, validation, logging

Integrations: Stripe, Razorpay, MasterGST, Slack webhooks, GitHub, third-party APIs

AI: Retrieval-Augmented Generation (RAG), LangChain, FAISS, OpenAI API, Google Gemini API, Ollama

Delivery: Docker, Kubernetes, Helm, Harbor, Trivy, GitHub Actions, Git, Linux

Work Experience

Full Stack Developer, Hostzop Cloud Technologies Pvt. Ltd. Aug 2023 - Present

- Built billing, usage, and server dashboards in PHP, JavaScript, AJAX, MySQL, and D3.js for 5,000+ users.
- Built the React.js reseller panel with Hooks, Context, and custom hooks for credits, plans, usage, and white-label domain and brand.
- Brought billing, sign-in, and provisioning into one set of APIs, with authentication, validation, logging, and one error handler.
- Stripe and Razorpay confirm a payment and turn the service on. MasterGST files the GST invoice from that same order.
- Built a FastAPI assistant so customers ask in the product. It answers only from internal docs and opens a ticket when it cannot finish.
- GitHub Actions replaced manual FTP. Release time dropped 5x and deployment issues dropped 90%.
- A GitHub repo or ZIP goes live through Docker, Harbor, Helm, TLS, and DNS. A failed image scan never goes live.

Full Stack Developer Intern, Aspire Systems Apr 2023 - Jul 2023

- Engineered a real-time face recognition attendance system using Python, OpenCV, cvzone, and NumPy.
- Serialized a facial-matching model with Pickle and sent recognized attendance records to Firebase.

Projects

AI Support Assistant (RAG)

Python, FastAPI, React, LangChain, FAISS, OpenAI API, Google Gemini API

- Customers ask a server question in the product instead of opening a ticket first.
- LangChain and FAISS pull the matching internal docs. OpenAI or Gemini answer only from that text.
- The assistant installs packages, creates files, and runs DNS, SSL, and stack checks.
- If it cannot finish, it opens a ticket with the chat context.

Hostzop SaaS Dashboards

PHP, JavaScript, AJAX, MySQL, D3.js, REST APIs

- White-label portals used by 1,000+ users. Dashboards serve 5,000+ active users.

- D3.js shows billing, usage, and server metrics. AJAX loads those numbers without a full page reload.
- A reseller attaches their own domain and branding and sells hosting under their name.
- Stripe and Razorpay confirm the payment and activate the service, so nobody turns the order on by hand.

Reseller Panel

React.js, Tailwind CSS, PHP, MySQL

- The panel covers credits, monthly plans, usage, and separate admin and reseller logins.
- Shared components and memoization improved UI responsiveness by 35%.
- The purchase runs VM provisioning, which cut setup from 40 minutes to 5 minutes.

Git-to-Live Application Platform

React, TypeScript, Fastify, PostgreSQL, Docker, Kubernetes, Helm, Harbor

- Takes a GitHub repo or ZIP and publishes it: stack detect, image build, Harbor, Helm, TLS, and DNS.
- AI writes the Dockerfile from the detected stack and returns the cause of a failed deploy.
- Trivy scans the image. Helm installs it in its own namespace.
- The React console shows live logs and a success or failure status.

E-Invoicing Automation

PHP, MasterGST API, MySQL

- MasterGST creates the GST invoice from the same order the billing system already recorded.
- GSTIN and invoice fields are checked before the invoice is filed.
- Removed 9+ hours of retyping each week, and filing errors on this flow went to zero.

AI Financial Document Analyzer

Python, Streamlit, vector search

- A question about an earnings-call transcript used to mean reading the whole document.
- Ingestion and vector search pull the matching passages, and the reply is written from that text.
- A Streamlit page takes the question or the summary request.

Education

Bachelor of Computer Applications (BCA) 2019 - 2022

Mohamed Sathak College of Arts and Science, Chennai

Diploma in Counseling Psychology (Online) 2020 - 2021

Sypa IIE

Certifications

- Full Stack Development - Offline Training
- Back-end Development - Meta
- JavaScript - Udemy
- Fundamentals of Cybersecurity - upGrad
- UX Design Process: Empathize, Define, and Ideate - Google

Awards

- Best Performer Award during the Aspire Systems internship for technical contribution and reliability.
- Led a 10-member team during NCC Camp, with responsibility for coordination and accountability.

Languages

English (Fluent), Tamil (Native), Hindi
