Professional Summary

Solution Engineer with 3+ years taking a customer problem from the flow to a working product. Designed the conversation and handoff for a production support assistant, connected payments and third-party APIs, and built the JavaScript and Node.js screens used to show those flows. The assistant answers from internal docs, carries out the setup step, and opens a ticket with the chat when it cannot finish.

Skills

Solution design: conversation flows, user and process flows, in-product handoff, product screens, REST APIs, JSON
JavaScript: JavaScript, TypeScript, React.js, Node.js, Express.js, Fastify, Hooks, Context, Tailwind CSS, Vite
Backend: Node.js, Fastify, Express.js, FastAPI, PHP, webhooks, authentication, validation, logging
Conversational AI: Retrieval-Augmented Generation (RAG), LangChain, FAISS, OpenAI API, Google Gemini API, Ollama
Integrations: Stripe, Razorpay, MasterGST, Slack webhooks, GitHub, third-party REST APIs
Delivery: Docker, Kubernetes, Helm, Harbor, Trivy, GitHub Actions, Git, Linux

Work Experience

Full Stack Developer, Hostzop Cloud Technologies Pvt. Ltd. Aug 2023 - Present

- Designed the support conversation in the product: the customer asks there first, the assistant answers only from internal docs, and a ticket opens with the chat when it cannot finish.
- Defined the steps that conversation can carry out: install a package, create files, and run DNS, SSL, and stack checks, so a person steps in only when the assistant cannot close it.
- Mapped billing, sign-in, and provisioning into one API flow, with authentication, validation, logging, and one error handler for external calls.
- Connected Stripe and Razorpay so a paid order turns the service on, and MasterGST files the GST invoice from that same order.
- Designed the reseller flow for credits, plans, usage, and white-label domain and brand, and built the React.js panel those users work in.
- Built the billing, usage, and server dashboards for that flow in PHP, JavaScript, AJAX, MySQL, and D3.js, used by 5,000+ users.
- Put the release on GitHub Actions, Docker, and Kubernetes. Release time dropped 5x and deployment issues dropped 90%. A failed image scan never goes live.

Full Stack Developer Intern, Aspire Systems Apr 2023 - Jul 2023

- Engineered a real-time face recognition attendance system using Python, OpenCV, cvzone, and NumPy.
- Serialized a facial-matching model with Pickle and sent recognized attendance records to Firebase.

Projects

Conversational Support Assistant
JavaScript, React, FastAPI, LangChain, FAISS, OpenAI API, Google Gemini API

- Designed the in-product conversation so a server question starts in the account instead of a ticket.
- The flow pulls the matching internal docs and answers only from that text. FastAPI serves the reply and React is the screen.
- When the next step is a setup action, the assistant carries it out: packages, files, DNS, SSL, and stack checks.
- The handoff is explicit. If the assistant cannot finish, it opens a ticket with the chat context.

Customer Billing and Account Flow
JavaScript, PHP, AJAX, MySQL, D3.js, REST APIs, JSON

- Designed one path for billing, usage, and server status, loaded in the page without a full reload.
- A reseller attaches their own domain and brand and sells hosting under their name. Portals serve 1,000+ users.
- Dashboards on that flow serve 5,000+ active users.
- Stripe and Razorpay sit in the same flow: a confirmed payment turns the service on, with no manual step.

Reseller Workflow

React.js, JavaScript, Tailwind CSS, PHP, MySQL, REST APIs

- Designed the reseller path for credits, monthly plans, usage, and separate admin and reseller logins.
- Built the React.js panel so that path is the screen the reseller uses. UI responsiveness improved by 35%.
- The purchase step starts VM provisioning, which cut setup from 40 minutes to 5 minutes.

Repo-to-Live Release Flow

React, TypeScript, Node.js, Fastify, PostgreSQL, Docker, Kubernetes, Helm

- Designed the path from a GitHub repo or ZIP to a live URL: stack detect, image build, Harbor, Helm, TLS, and DNS.
- The React console is the walkthrough: live logs and a success or failure status for each release.
- A failed image scan stops the release. Each app stays in its own namespace.
- The same API adds a domain, a database, and WordPress after the app is live.

Invoice Process Flow

PHP, MasterGST API, MySQL, REST, JSON

- Designed the invoice path so finance does not retype an order the billing system already recorded.
- GSTIN and invoice fields are checked before filing, and MasterGST creates the invoice from that order.
- Removed 9+ hours of retyping each week, and filing errors on this flow went to zero.

Document Question Flow

Python, Streamlit, vector search

- Designed a question-and-answer flow over earnings-call transcripts, so a question does not mean reading the whole document.
- Vector search pulls the matching passages, and the reply or summary is written from that text.
- Streamlit is the screen where the user asks the question or requests the summary.

Education

Bachelor of Computer Applications (BCA) 2019 - 2022
Mohamed Sathak College of Arts and Science, Chennai

Diploma in Counseling Psychology (Online) 2020 - 2021
Sypa IIE

Certifications

- Full Stack Development - Offline Training
- Back-end Development - Meta
- JavaScript - Udemy
- Fundamentals of Cybersecurity - upGrad
- UX Design Process: Empathize, Define, and Ideate - Google

Awards

- Best Performer Award during the Aspire Systems internship for technical contribution and reliability.
- Led a 10-member team during NCC Camp, with responsibility for coordination and accountability.

Languages

English (Fluent), Tamil (Native), Hindi
