Professional Summary

React Developer with 3+ years building production interfaces in React.js and JavaScript (ES6+). The reseller panel and the Kubernetes deploy console are React.js, and the panel is used by 1,000+ users. State sits in Hooks, Context, and custom hooks. Memoization, lazy loading, and shared components improved UI responsiveness by 35%. The billing dashboards beside those screens are PHP, JavaScript, and AJAX and serve 5,000+ users. Also shipped mobile-first React apps with Vite for events and a coaching academy.

Skills

React: React.js, React Hooks, Context API, Custom Hooks, React Router, Component Architecture

UI: JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, CSS Grid, Flexbox, Emotion, Mobile-First Design

Data in the UI: D3.js, REST APIs, Axios, Fetch API, JSON

Performance: Code Splitting, Lazy Loading, Memoization (useMemo, useCallback), Reusable Components

Tools: Vite, Git, GitHub, Chrome DevTools, GitHub Actions

Work Experience

Full Stack Developer, Hostzop Cloud Technologies Pvt. Ltd. Aug 2023 - Present

Chennai, India

- Problem: a reseller had no React screen to sell hosting under their own name, and each view rebuilt the same components. I built the reseller panel as reusable React components, with Hooks, Context, and custom hooks, and separate admin and reseller logins. Impact: the panel is used by 1,000+ users.
- Problem: a repo or ZIP became a live URL only after someone checked the server. I built the Kubernetes deploy console in React.js so the stack, the image scan, the namespace, TLS, live logs, and a success or failure status sit on one screen.
- Problem: expensive parts of the tree re-rendered on every change. I added memoization, lazy loading, and code splitting. Impact: UI responsiveness improved by 35%.
- Problem: sign-in, billing, and a failed request had no shared UI state. I connected the React apps to the REST APIs and added loading, empty, and error states, plus form validation.
- Also shipped mobile-first React apps in Vite: a digital invitation with a map, schedule, and gallery, an event marketing site, and a coaching-academy site in Tailwind CSS. The billing dashboards next to this work are PHP, JavaScript, and AJAX and serve 5,000+ users.

Full Stack Developer Intern, Aspire Systems Apr 2023 - Jul 2023

- Engineered a real-time face-recognition attendance system using Python, OpenCV, cvzone, and NumPy.
- Serialized a face-matching model with pickle and sent recognized attendance records to Firebase.

Projects

Reseller Panel

React.js, Tailwind CSS

- Problem: a reseller had no component model for credits, plans, and usage, so every screen was a one-off page.
- Built: the panel as reusable React components, with Hooks, Context, and custom hooks, and separate admin and reseller logins.
- Built: screens for credit billing, monthly plans, usage, and the white-label domain and brand. Tailwind CSS carries that layout.
- Impact: the panel is used by 1,000+ users. Memoization and shared components improved UI responsiveness by 35%.

Hostzop Kubernetes PaaS

React.js

- Problem: a GitHub repo or a ZIP became a live URL only after someone checked the server, with no React screen for the build, the scan, or the result.
- Built: the deploy console in React.js. It shows the detected stack, the image build, the Trivy scan, the namespace, TLS, DNS, live logs, and a success or failure status.
- Impact: the customer watches the app reach a URL from that screen, and a failed scan never looks like a live site.

Spotcard Digital Invitation Platform

Vite, React.js, Emotion

- Problem: the invitation could not be a React screen on a phone, so the map, schedule, and photos were out of reach.
- Built: the app in Vite and React, with Emotion and a component for the host profile, the media, and the event details.
- Built: routes for the guest page, including the map, the schedule, add-to-calendar, and the media gallery.
- Impact: the guest uses one React app on a phone instead of a static image.

Grandstand Event Website

Vite, React.js, CSS

- Problem: the marketing page was a heavy bundle, and the React layout did not hold on a small screen.
- Built: the site in Vite and React, with CSS Grid and Flexbox, and trimmed images and bundles for PageSpeed on desktop and mobile.
- Impact: the page stays light on both screens, without a second mobile site.

Muthayammal NEET Academy Website

React.js, Tailwind CSS

- Problem: courses, faculty, facilities, and student highlights were not readable on a phone.
- Built: the site in React and Tailwind CSS, with a component per section and a layout for phones and tablets.
- Impact: a student or parent can read each section on a phone without pinching the page.

In-Product Support Chat

React.js, REST APIs

- Problem: a hosting question had no React screen inside the account, so the user left the product to open a ticket.
- Built: the chat screen in React, with loading and error states, talking to the FastAPI assistant.
- Built: the screen shows the reply from the docs, and when the assistant cannot finish it shows that a ticket was opened with the chat context.
- Impact: the user asks and gets the next step inside the account, instead of starting from an empty ticket.

Education

Bachelor of Computer Applications (BCA) 2019 - 2022

Mohamed Sathak College of Arts and Science, Chennai

Diploma in Counseling Psychology (Online) 2020 - 2021

Sypa IIE

Certifications

- Full Stack Development - Offline Training
- Back-end Development - Meta
- JavaScript - Udemy
- Fundamentals of Cybersecurity - upGrad
- UX Design Process: Empathize, Define, and Ideate - Google

Awards

- Best Performer Award during the Aspire Systems internship for technical contribution and reliability.
- Led a 10-member team during NCC Camp, with responsibility for coordination and accountability.

Languages

English (Fluent), Tamil (Native), Hindi
