Professional Summary

Full Stack Developer with 3+ years building a hosting SaaS end to end: accounts, billing, subscriptions, and the screen customers use. White-label client and reseller portals serve 1,000+ users, and the dashboards serve 5,000+ active users. Stripe and Razorpay confirm a payment and turn the service on, so nobody does that by hand. MasterGST creates the GST invoice from that same order, which removed 9+ hours of manual finance work each week and took filing errors on this flow to zero. Customers can also deploy an app from the product, on a Git-to-live Kubernetes path.

Skills

Frontend: JavaScript, AJAX, D3.js, HTML5, CSS3, React.js, TypeScript, Tailwind CSS, Vite, Responsive Web Design

Backend: PHP, JavaScript, AJAX, Node.js, Express.js, Fastify, Python, FastAPI, RESTful APIs, Authentication and Authorization

Databases: MySQL, PostgreSQL, MongoDB, Firebase

Product integrations: Stripe, Razorpay, MasterGST, Slack Webhooks, Payment Gateways, Third-Party APIs

Delivery: Git, GitHub, CI/CD, GitHub Actions, Docker, Kubernetes, Helm, Linux

Work Experience

Full Stack Developer, Hostzop Cloud Technologies Pvt. Ltd. Aug 2023 - Present

- Problem: billing, sign-in, provisioning, and the user record were not one product. I built those APIs in PHP, JavaScript, and AJAX, with authentication, validation, logging, and centralized error handling. Impact: one account runs the order, the user, and the service.
- Problem: a reseller could not see billing, usage, and server status without a reload or a second tool. I built the dashboards in PHP, JavaScript, AJAX, D3.js, and MySQL. Impact: they serve 5,000+ active users.
- Problem: a reseller could not sell the hosting product under their own name. I built the white-label client and reseller portals with a custom domain, branding, and role-based access. Impact: those portals are used by 1,000+ users.
- Problem: a paid order and the GST invoice were finished by hand. Stripe and Razorpay confirm the payment and activate the service. MasterGST creates the invoice from that order and checks the GSTIN before filing. Impact: the service turns on with no manual step, about 9 hours of finance work came off each week, and filing errors on this flow went to zero.
- Problem: a customer could buy hosting and still needed someone to put their app online, and a hosting question opened a ticket first. I built the Git-to-live path inside the product, and a support assistant that answers from the internal docs, connects to the server, and opens a ticket only when it cannot finish the fix.

Full Stack Developer Intern, Aspire Systems Apr 2023 - Jul 2023

- Engineered a real-time face-recognition attendance system using Python, OpenCV, cvzone, and NumPy.
- Serialized a face-matching model with pickle and sent recognized attendance records to Firebase.

Projects

Hostzop SaaS Ecosystem

PHP, JavaScript, AJAX, MySQL, D3.js, REST APIs

- Problem: clients and resellers had no single place for billing, usage, and server status, and a reseller could not sell under their own name.
- Built: the client and reseller portals and the D3.js dashboards. AJAX loads billing, usage, and server metrics from the PHP APIs without a full page reload.
- Built: custom domains, branding, and role-based access, so a reseller sells the hosting product under their own name.
- Impact: the portals are used by 1,000+ users and the dashboards serve 5,000+ active users.

Reseller Cloud Management Platform

PHP, JavaScript, AJAX, MySQL

- Problem: buying, tracking, and reselling a VM was split across tools, so credits, the monthly plan, and usage were not on one account.
- Built: the panel to purchase, manage, and resell VMs, with credit-based billing, monthly subscriptions, and usage tracking.
- Built: separate admin and reseller logins, role-based access, and a profit view so the reseller sees sales and cost together.
- Impact: the plan, the usage, and the order sit on one account, and the purchase starts the VM instead of a ticket.

Payment Activation

Stripe, Razorpay, PHP, MySQL

- Problem: Stripe or Razorpay could take the money while the hosting service stayed off until someone turned it on.
- Built: the payment check in the billing flow, and a successful payment writes the billing state and activates the service on that same account.
- Impact: a paid order turns on with no manual step.

E-Invoicing in the Billing Product

MasterGST API, PHP, MySQL

- Problem: finance retyped the GST invoice from an order the product already had, and a bad GSTIN was found only at filing time.
- Built: the MasterGST call from that same order, with GSTIN and invoice fields checked before the invoice is filed.
- Impact: this removed 9+ hours of manual finance work each week, and filing errors on this flow went to zero.

In-Product Support Assistant

Python, FastAPI, React, LangChain, FAISS

- Problem: a hosting question opened a ticket before anyone checked the docs, and DNS, SSL, and stack checks were done by support by hand.
- Built: the assistant inside the hosting account. LangChain and FAISS pull the matching docs and runbooks, and the model answers only from that text. FastAPI serves the reply and React is the chat screen.
- Built: it connects to the server to install packages, create files and folders, and run DNS, SSL, and stack checks. If it cannot finish, it opens a ticket with the chat context.
- Impact: the customer gets an answer in the product first. A person steps in only when the assistant cannot finish the fix.

Education

Bachelor of Computer Applications (BCA) 2019 - 2022

Mohamed Sathak College of Arts and Science, Chennai

Diploma in Counseling Psychology (Online) 2020 - 2021

Sypa IIE

Certifications

- Full Stack Development - Offline Training
- Back-end Development - Meta
- JavaScript - Udemy
- Fundamentals of Cybersecurity - upGrad
- UX Design Process: Empathize, Define, and Ideate - Google

Awards

- Best Performer Award during the Aspire Systems internship for technical contribution and reliability.
- Led a 10-member team during NCC Camp, with responsibility for coordination and accountability.
