Professional Summary

AI Full Stack Developer with 3+ years of experience building SaaS products and AI-powered applications. Skilled in React, TypeScript, Python, FastAPI, and RAG-based systems using LLMs, LangChain, and vector databases. Experienced in developing intelligent AI assistants, scalable APIs, cloud hosting platforms, and Kubernetes-based deployment workflows with AI-powered Dockerfile generation and deployment troubleshooting.

Skills

AI application: Retrieval-Augmented Generation (RAG), LangChain, FAISS, FastAPI, Python, OpenAI API, Google Gemini API, Dockerfile generation, deploy error diagnosis, Ollama

Frontend: JavaScript, AJAX, HTML5, CSS3, D3.js, React.js, TypeScript, Tailwind CSS, Vite

Backend: PHP, Node.js, Express.js, Fastify, FastAPI, Python, RESTful APIs, Authentication and Authorization

Databases: MySQL, PostgreSQL, MongoDB, Firebase, SQLite

Delivery: Docker, Kubernetes, Helm, GitHub Actions, Git, GitHub, Linux

Work Experience

Full Stack Developer, Hostzop Cloud Technologies Pvt. Ltd. Aug 2023 - Present

- Built an AI support assistant so customers ask hosting questions in the product, using FastAPI, React, and internal docs.
- Built hosting dashboards and APIs in PHP, JavaScript, AJAX, MySQL, and D3.js for 5,000+ users.
- Stripe and Razorpay verify a payment and turn the service on immediately.
- Built a Git-to-live Kubernetes path. AI writes the Dockerfile from the detected stack and diagnoses a failed deploy.
- GitHub Actions cut release time by 5x and deployment issues by 90%.

Full Stack Developer Intern, Aspire Systems Apr 2023 - Jul 2023

- Engineered a real-time face recognition attendance system using Python, OpenCV, cvzone, and NumPy.
- Serialized a facial-matching model with Pickle and sent recognized attendance records to Firebase.

Projects

AI Support Assistant (RAG)

Python, FastAPI, React, LangChain, FAISS, MySQL, OpenAI API, Google Gemini API

- Customers ask a server question in the product instead of opening a ticket first.
- LangChain and FAISS pull the matching internal docs. OpenAI or Gemini answer only from that text.
- FastAPI serves the reply. React is the screen inside the hosting account.
- Common setup steps run on their own. If the assistant cannot fix the issue, it opens a ticket.

Hostzop Kubernetes PaaS (Git to Live URL)

React, TypeScript, Fastify, PostgreSQL, Docker, Kubernetes, Helm, Harbor

- Takes a GitHub repo or ZIP and publishes it: stack detect, image build, Harbor, Helm, TLS, and DNS.
- AI writes the Dockerfile from the detected stack, so the customer does not write the container file.
- AI reads a failed build or deploy log and returns the cause, not only the raw log.
- Trivy scans the image, Helm installs it in its own namespace, and the same API adds a domain, a database, and WordPress.

Hostzop SaaS Ecosystem (Client and Reseller Platforms)

PHP, JavaScript, AJAX, MySQL, D3.js, REST APIs

- White-label portals in PHP, JavaScript, AJAX, and MySQL, used by 1,000+ users. Dashboards serve 5,000+ active users.
- A reseller attaches their own domain and branding and sells hosting under their name.
- D3.js shows billing, usage, and server metrics. AJAX loads those numbers from the APIs without a full page reload.
- Stripe and Razorpay confirm the payment and activate the service, so nobody turns the order on by hand.

Reseller Cloud Management Platform

PHP, JavaScript, AJAX, MySQL, REST APIs

- A customer buys VMs, manages them, and resells them. Built in PHP, JavaScript, AJAX, and MySQL.
- Credits, monthly plans, and usage sit on one account, so the reseller sees sales and cost together.
- Admin and reseller views show profit, usage, and clients, with separate logins.
- The purchase runs VM provisioning, which cut setup from 40 minutes to 5 minutes.

E-Invoicing Automation

PHP, MasterGST API, MySQL

- MasterGST creates the GST invoice from the same order the billing system already recorded.
- GSTIN and invoice fields are checked before the invoice is filed.
- Removed 9+ hours of retyping each week, and filing errors on this flow went to zero.

Spotcard - Digital Invitation Platform

React.js, Node.js, Vite

- Mobile-first invitation link for an event, instead of a paper card or a static image.
- APIs store the host profile, media, and event details.
- The guest page has a map, a schedule, a calendar add, and a media gallery.

AI Email Sender

Python, Ollama, SMTP, SQLite, Pandas

- Ollama writes a separate email for each spreadsheet row from that lead's data, not one copied template.
- The prompt can add a role line and an India or UAE resume when the row asks for it.
- SQLite blocks a second send to the same address. SMTP sends with a rate limit.

Education

Bachelor of Computer Applications (BCA) 2019 - 2022

Mohamed Sathak College of Arts and Science, Chennai

Diploma in Counseling Psychology (Online) 2020 - 2021

Sypa IIE

Certifications

- Full Stack Development - Offline Training
- Back-end Development - Meta
- JavaScript - Udemy
- Fundamentals of Cybersecurity - upGrad

Awards

- Best Performer Award during the Aspire Systems internship for technical contribution and reliability.

Languages

English (Fluent), Tamil (Native), Hindi
