Professional Summary

Platform Engineer with 3+ years taking a hosting business from manual releases to a Git-to-live Kubernetes path. GitHub Actions cut release time by 5x and deployment issues by 90%. A new VM is ready in 5 minutes instead of 40. The billing platform on that stack serves 5,000+ users and turns a paid order on without a manual step.

Skills

Platform: Docker, Kubernetes, Helm, Harbor, cert-manager, Trivy, Rancher, Linux, Nginx

Delivery: GitHub Actions, CI/CD, Git, GitHub, SSH deployments, Cron jobs

Backend: PHP, Node.js, Fastify, FastAPI, Python, RESTful APIs, PostgreSQL, MySQL

Frontend: React.js, TypeScript, JavaScript, AJAX, HTML5, CSS3, D3.js, Vite

Integrations: Stripe, Razorpay, GitHub Apps, Slack Webhooks, MasterGST API

Work Experience

Full Stack Developer, Hostzop Cloud Technologies Pvt. Ltd. Aug 2023 - Present

- Cut release time by 5x and deployment issues by 90% after GitHub Actions and SSH replaced manual FTP.
- Cut VM and VPS setup from 40 minutes to 5 minutes, with cron jobs for IP monitoring and VPS suspension.
- Put a GitHub repo or ZIP live: stack detect, Docker build, Harbor, Helm, TLS, and DNS, with no manual server step.
- AI writes the Dockerfile from the detected stack and returns the cause of a failed build, not only the raw log.
- Trivy blocks a bad image. Each app runs in its own namespace with cert-manager TLS on a Rancher HA cluster.
- One API adds a domain, a database, and WordPress, and each release shows live logs and a pass or fail status.
- Billing dashboards for 5,000+ users in PHP, JavaScript, AJAX, MySQL, and D3.js. Payment turns the service on.
- White-label portals for 1,000+ users let resellers sell hosting on their own domain and brand.

Full Stack Developer Intern, Aspire Systems Apr 2023 - Jul 2023

- Delivered real-time attendance: Python, OpenCV, cvzone, and NumPy recognize a face as the person arrives.
- Stored the face-matching model with Pickle and wrote each recognized attendance record to Firebase.

Projects

Hostzop Kubernetes PaaS (Git to Live URL)

React, TypeScript, Fastify, PostgreSQL, Docker, Kubernetes, Helm, Harbor

- A GitHub repo or ZIP goes live with no manual server setup: stack detect, image build, Harbor, Helm, TLS, and DNS.
- AI writes the Dockerfile from the detected stack, so the customer does not write the container file.
- AI reads a failed build or deploy log and returns the cause, not only the raw log.
- Trivy scans the image, Helm installs it in its own namespace, and the same API adds a domain, a database, and WordPress.

CI/CD and Deployment Automation

GitHub Actions, Linux, Git, SSH, Nginx

- Pipelines build and deploy React.js, Node.js, and PHP over SSH, replacing manual FTP.

- Release cycle time dropped 5x and deployment-related issues dropped 90%.
- Linux and Nginx serve the released apps. Each release exposes live logs and a success or failure status.

Hostzop SaaS Ecosystem (Client and Reseller Platforms)

PHP, JavaScript, AJAX, MySQL, D3.js, REST APIs

- White-label portals used by 1,000+ users. Dashboards serve 5,000+ active users.
- A reseller attaches their own domain and branding and sells hosting under their name.
- D3.js shows billing, usage, and server metrics, loaded by AJAX without a full page reload.
- Stripe and Razorpay confirm the payment and activate the service, so nobody turns the order on by hand.

Reseller Cloud Management Platform

PHP, JavaScript, AJAX, MySQL, REST APIs

- A customer buys VMs, manages them, and resells them, in PHP, JavaScript, AJAX, and MySQL.
- Credits, monthly plans, and usage sit on one account, so the reseller sees sales and cost together.
- Admin and reseller views show profit, usage, and clients, with separate logins.
- The purchase runs VM provisioning, which cut setup from 40 minutes to 5 minutes.

AI Support Assistant (RAG)

Python, FastAPI, React, LangChain, FAISS, OpenAI API, Google Gemini API

- Customers ask a server or hosting question inside the product instead of opening a ticket first.
- LangChain and FAISS pull the matching internal docs and runbooks. The model answers only from that text.
- FastAPI serves the reply. React is the chat screen inside the hosting account.
- Common setup steps run on their own: DNS, SSL, and stack checks that support used to do by hand.
- If the assistant cannot fix the issue, it opens a ticket with the chat context.

E-Invoicing Automation

PHP, MasterGST API, MySQL

- MasterGST creates the GST invoice from the same order the billing system already recorded.
- GSTIN and invoice fields are checked before the invoice is filed.
- Removed 9+ hours of retyping each week, and filing errors on this flow went to zero.

Education

Bachelor of Computer Applications (BCA) 2019 - 2022

Mohamed Sathak College of Arts and Science, Chennai

Diploma in Counseling Psychology (Online) 2020 - 2021

Sypa IIE

Certifications

- Full Stack Development - Offline Training
- Back-end Development - Meta
- JavaScript - Udemy
- Fundamentals of Cybersecurity - upGrad
- UX Design Process: Empathize, Define, and Ideate - Google

Awards

- Best Performer Award during the Aspire Systems internship for technical contribution and reliability.
- Led a 10-member team during NCC Camp, with responsibility for coordination and accountability.

Languages

English (Fluent), Tamil (Native), Hindi
